2020 Consumer Confidence Report

Water System Name:	LOCKEF	ORD CSD	F	Report Date: _	July 2021	<u></u>	
We test the drinking report show		uality for many ults of our moni		-	-	_	This
Este informe contie	ene inform	acion muy import	tante sobre su entienda bio	•	Traduzcalo o ha	ıble con alguien que	e lo
Type of water source(s) in use:	Groundwater					
Name & location of so	urces(s)	Tower well #2F	R, Bear Creek	well #3, Bluff	s well #4, Jack	Tone well #5	
Drinking Water Source	e Assessm	ent information:	At the office	ce			
Time and Place of regu	ularly sche	duled board mee	etings for public	participation	: 2 nd Thursday	of each month @ 9	9am
	·				Old School Hou	se 19456 Jack Tone	₽ Rd.

TERMS USED IN THIS REPORT

<u>Maximum Contaminant Level (MCL)</u>: The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste and appearance of drinking water.

<u>Maximum Contaminant Level Goal (MCLG)</u>: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA)

<u>Public Health Goal (PHG):</u> The level of a contaminant in drinking water below which there is no known expected risk to health. PHGs are set by the California Environmental Protection Agency.

<u>Maximum Residual Disinfectant Level (MRDL)</u>: The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

<u>Maximum Residual Disinfectant Level Goal (MRDLG)</u>: The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLGs are set by the U.S. Environmental Protection Agency. <u>Primary Drinking Water Standards (PDWS)</u>: MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

<u>Secondary Drinking Water Standards (SDWS):</u> MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

<u>Treatment Technique (TT):</u> A required process intended to reduce the level of a contaminant in drinking water. <u>Regulatory Action Level (AL):</u> The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

For more information, contact: Joseph Salzman (209) 727-5035

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

<u>pCi/L</u>: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants,* such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- *Inorganic contaminants*, such as salts and metals that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban storm water runoff and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals that are byproducts of
 industrial processes and petroleum production and can also come from gas stations, urban storm water runoff,
 agricultural application and septic systems.
- Radioactive contaminants that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the state Department of Public Health (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA								
Microbiological Contaminants (to be completed only if there was a detection of bacteria)	Highest # of detections	# of months in violation		MCL			MCLG	Typical Source of Bacteria
Total Coliform Bacteria	(In a month) 0	0	More than 1 sample in a month with a detection				0	Naturally present in the environment
Fecal Coliform or <i>E. coli</i>	(In a year) O	0						Human and animal fecal waste
TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER								
Lead and Cooper (to be completed only if there was a detection of lead or copper in the last sample set)	# of samples collected	90 th percentile level detected	# of sites exceeding AL	AL	PHG	Typical Source of Contaminant		
Lead (ppm) Sampled 2018	10	0	0	15ppb	2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits.		
Copper (ppm) Sampled 2018	10	.237	0	1.3ppm	0.17	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives.		

	Table 3	3 – SAMPLIN	G RESULTS FO	R SODIUM A	ND HARDNES	SS	
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
Sodium (ppm)	2/14/2019	15.75 average	15 to 17	None	None	Generally found in ground & surface water	
Hardness (ppm)	2/14/2019	97.6 average	85.2 to 110	None	None	Generally found in ground & surface water	
Table 4 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
Nitrogen	2/11/2020	1.4 mg/l	ND to 1.4mg/l	10	10	Runoff and leaching of septic tanks, leach fields and fertilizers.	
Regulated VOC's	3/07/2017	ND	ND	Varies	Varies	Used in manufacturing of many products.	
Perchlorate	5/02/2017	ND	ND	6 ug/l		Used in rocket fuel and air bag inflation devices.	
Nitrite	2/14/19	ND	ND	0.4			
TABLE 5 – DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
Iron	2/09/2019	100 ug/l	ND to 100 at all wells	300 ug/l		Occurs naturally	
Manganese	2/09/2019	ND ug/l	ND at all wells	300 ug/l		Occurs naturally	
DBCP & EDB	2/14/2019	ND	ND at all wells	0.2 & 0.05		Used in farming	
Atrazine	9/01/2020	ND	Well 2R	1		Herbicide	
Simazine	9/01/2020	ND	Well 2R	4		Herbicide	
	TABLI	E 6 – DETECT	ION OF UNRE	GULATED CO	NTAMINANTS	5	
Chemical or Constituent (and reporting units)	Sample Date	e Leve Detect		ation Level		Health Effects Language	
Gross Alpha, Radiological Wells 3, 4, 5	10/28/2014	1.40 to 2 pCi/l		5pCi/L	pCi/L Occurs naturally		
Radium 228, Radiological Well 2R	04/24, 07/10 10/09/18	0.000 0.213 pCi/l	3	? pCi/L	Occurs naturally		

^{*}Any violation of an MCl or AL is marked with an asterisk. Additional information regarding the violation is provided later in this report.

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More inforamtioan about contaminants and potential health efferts can be obrtained by calling the USEPA's Safe Drinking Water hotline (1-800-426-4791)
